

FGM Awarded Department of Defense Net-Centric Enterprise Service Management (ESM) Contract

Press Release

FGM TO PROVIDE SUPPORT FOR THE DEVELOPMENT, REFINEMENT, AND INTEGRATION OF KEY NCES CORE ENTERPRISE SERVICES

RESTON, VA – May 8, 2009 – The Department of Defense (DoD) has awarded FGM, Inc. a contract to design, develop, and maintain the Net-Centric Enterprise Services (NCES) Enterprise Service Management capability.

FGM will also advocate improvements of capabilities to better enable the realization of the DoD Net-Centric Data and Services Strategies on the Global Information Grid (GIG).

The goal of NCES is to enable the secure, agile, robust, dependable, interoperable data-sharing environment for DoD where warfighter, business, and intelligence users share knowledge on a global network. This type of environment ensures information superiority, accelerates decision-making, effective operations and net-centric transformation.

NCES provides a set of foundational SOA capabilities and web services that directly support Net-Centric operations on the Global Information Grid (GIG). By enabling information owners and service providers to effectively advertise their web services, and for consumers to securely and efficiently find and use those services, the SOA Foundation (SOAF) product line facilitates interoperability and information sharing in a net-centric environment. The SOAF product line provides a scalable, robust, widely available set of standard services that enable Communities of Interest and Programs of Record to advertise, discover, and manage web services exposed to the GIG and the DoD Enterprise.

FGM's President and CEO, Scott Gessay, said: "FGM is looking forward to continuing to support the NCES program by leveraging our SOA expertise in developing and deploying ESM services."

About FGM

Founded in 1987, FGM is an industry leader in providing innovative information technology (IT) services for the Federal government. FGM is headquartered in Reston, Virginia, with offices in Suffolk, Virginia; San Antonio, Texas; Omaha, Nebraska; Honolulu, Hawaii; Colorado Springs, Colorado; and San Diego, California. They specialize in software and systems development and integration, including Service Oriented Architecture (SOA) environments.
